

Connected Ecosystem

Built to work together.
Built for connected possibilities.

Industrial data doesn't stop
at one application, protocol
or architecture. Neither do we.

One ecosystem. Designed to connect.

AUTOSOL Connected Ecosystem brings together purpose-built technologies for collecting, moving, distributing and managing industrial data. Deploy the products you need today, with an ecosystem designed to work together as your architecture evolves.

ACM

Connect the field.

Multi-protocol data collection for real-time and historical SCADA data.

eACM

Bring intelligence to the edge

Edge-based polling and MQTT Sparkplug publishing with local storage and automatic backfill.

FoundationMQ

Move data where it needs to go.

A purpose-built Sparkplug aware broker connecting publishers, subscribers and applications across the enterprise.

ARK

Bring intelligence to the edge

Centralized management and visibility for distributed AUTOSOL applications.

NEW

COLLECT

From field devices and systems

CONNECT

Across environments and applications

DISTRIBUTE

With a secure, reliable MQTT broker

MANAGE

For visibility, control and scale

Use one. Connect several. Build what your architecture requires.

Meet FoundationMQ

The MQTT Broker built for industrial data.

FoundationMQ provides the secure, reliable message distribution layer between MQTT publishers and subscribers, helping industrial organizations connect edge systems, SCADA applications and enterprise destinations without adding unnecessary complexity.

FoundationMQ

MQTT BROKER

FoundationMQ

Essential MQTT broker capabilities for focused deployments.

- Reliable and secure message exchange
- Unlimited connections, tags and messages
- Easy to deploy and manage
- Ideal for small to mid-sized environments

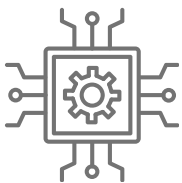

FoundationMQ+

Enterprise capabilities for environments that demand more.

- Advanced security and user management
- Federated clustering across data centers
- Enterprise grade monitoring
- Built for enterprise and mission-critical deployments

A simple architecture. A more connected operation.

Field Devices

PLCs, RTUs, Sensors

ACM /eACM

Collect & Publish

FoundationMQ

Distribute

Applications

SCADA, Historian,
Analytics, Enterprise

Connected possibilities start with the right connection.

Four products. One ecosystem. A stronger tomorrow.

The AUTOSOL Connected Ecosystem

Purpose-built industrial software.

Designed to work together.

AUTOSOL helps industrial organizations unlock the value of their data with software that connects across devices, systems, and people. Our products are purpose-built, field-proven, and designed to work together, so you can solve today's challenges and be ready for what's next.

**REAL-WORLD
EXPERIENCE**

Industrial focus.
Proven results.

**PURPOSE-BUILT
SOLUTIONS**

Built for demanding
environments.

**CONNECTED
POSSIBILITIES**

Today's needs.
Tomorrow's opportunities
